Project: New 3T MRI and Casualty Plus Suite with associated works

Client: Hospital of St John & St Elizabeth

Value: £550,000

Duration: 16 weeks overall

These projects were secured following open market competitive tender and it was decided to phase and combine the projects due to their close proximity. This enabled the contractor to prepare a detailed phasing programme, in conjunction with the on site client departments, to minimise the disruption arising from construction works for the client, who's operations were maintained throughout.

The project involved strip out works, structural remodelling, diversion of existing services, new construction installation and full fitting out before client phased handovers.

Works were also coordinated with the MRI scanner specialist contractor Siemens.
